

EPOXY SPRAY LINING FOR LIQUID-COOLED GENERATOR STATOR BAR  
CLIPS

ABSTRACT OF THE DISCLOSURE

[0019] A method of coating a stator bar end inserted through an opening within a stator bar end fitting, the fitting having a chamber and the stator bar end having free ends of solid and hollow strands exposed within the chamber, the method including inserting a spray head nozzle through another opening in the fitting and in proximity to the free ends of the solid and hollow strands; spraying an epoxy resin composition so as to form a coating over the free ends of the solid and hollow strands and over at least a portion of adjoining wall surfaces of the fitting within the chamber; and curing the coating.
